

COFOMO - Cooperation for Open Mobility Markets

Table of Contents

Introduction	1
Exploration Management	1
Identity Management	1
Transaction Management	1

This is the API documentation of the COFOMO-Project. COFOMO was created with the intention to implement an open mobility market in order to protect the competition against the rise of monopolys. Furthermore it aims for the protection of data privacy and data sovereignty.

Introduction

COFOMO is build around the division of domain-specific architecture modules. In the following architecture diagram the four main modules are displayed which are Exploration-Management, Identity-Management, Transaction-Managaement and Data-Access-Management. Each of those modules is represented by open source projects which will be described in this documentation.
